

Practical Sheet – IV

Note: Use Exception Handling in all programs.

1. Write a program to create a file and input five person full name in file and read the information from file.
2. Write a program to search a word in to the file. If word is found count number of occurrence and print total no of occurrence for that word.
3. Write a program store each word from file and count how many time a particular word is in the file.

e.g file content is :

mca1 have lectures today

mca1 have all the material

mca1 is a good class

Output should be like:

mca1: 3

have : 2

lectures : 1
